

Flow ELITE

Elegant and smart

FlowELITE is equipped with a humidity sensor, CO₂ and VOC sensor, Color Trust technology, LED lighting kit and control functions via mobile app.

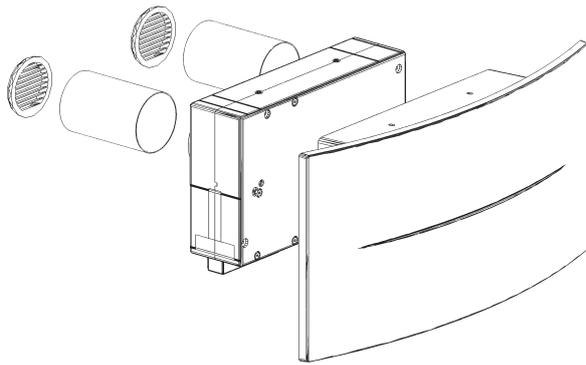

Like the other Flow models, it guarantees high heat recovery and pollutant filtration performance. Advanced features make it a **furnishing element that adds a stylish touch to rooms while ensuring comfort and well-being.**

The design cover integrates **dimnable and time-controllable LED** lights on the sides that create atmospheric accessory lighting, particularly suitable for living room installations. Performance is automatically modulated by the **hygrometric** sensor and the **CO₂ and VOC** sensor to prevent excessive pollutant concentrations and increase air renewal for improved oxygenation.

Healthy air at your fingertips

The **Color Trust light sensor** signals the **air quality** in the home, informing the user simply when pollutant values are too high. The new **Helty Home app** makes using the HRV even easier, allowing remote management of ventilation systems and providing real-time indoor air quality readings.

Sensors for automatic humidity, CO₂ and VOC management

Dimmable LED light kit.

It is easy to control it from anywhere in the room using the included infrared remote control.

Kit		installation manual, user manual, installation template, HRV filter, 2 white external grills, 2 air ducts (Ø80, 500 mm), wall mounting kit, IR remote control with batteries
Code		1VMC01013

1. In hyperventilation mode
2. With 230 V AC supply voltage

3. According to UNI 3744:2010
4. Measured in a 30 m² semi-anechoic environment at a distance of 3 m

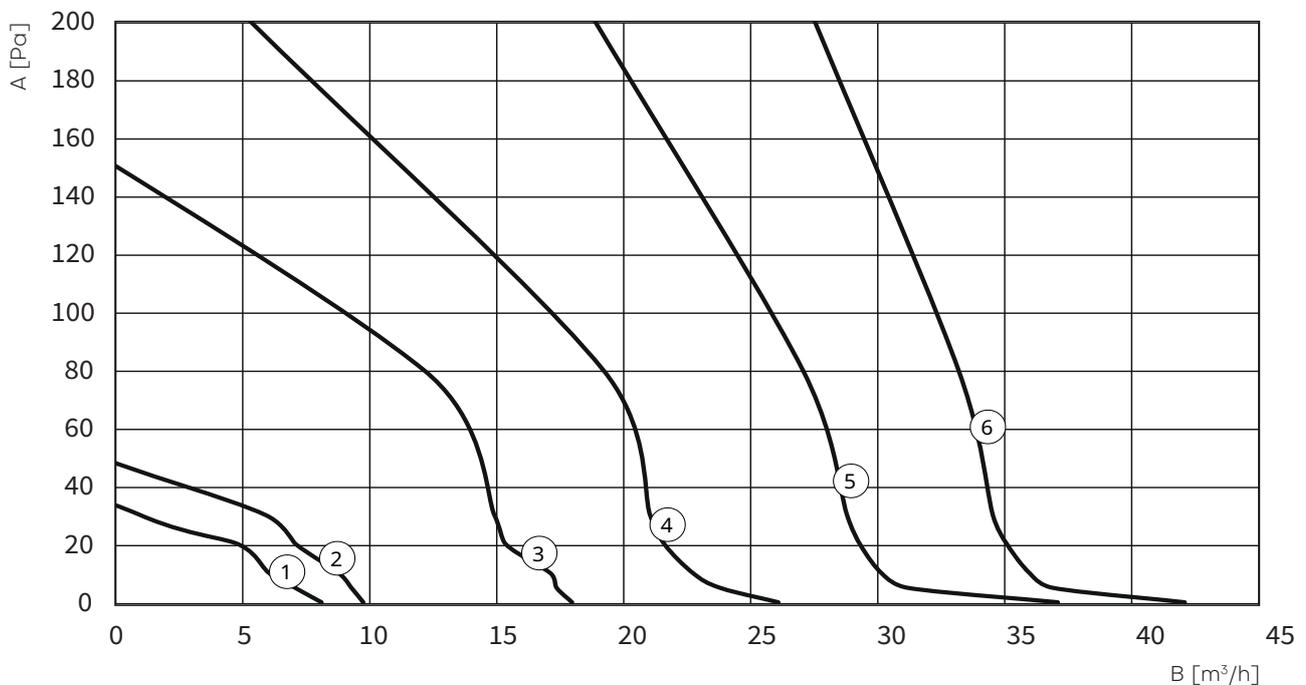

5. The Cloud control panel functions are lost
6. In accordance with EN 13141-8:2014-09

Wall-mounted HRV

Wall-mounted HRV systems allow plug-and-play installation. Installation requires two small 80-mm coring holes in the masonry, inserting and sealing the tubes in the masonry section, fixing the unit to the wall with pressure screws, electrical connection and positioning the grills outside. **The grills can be installed directly from inside the house using the 100 mm ducting kit (optional).**

See the instruction manual for more details. For the best air distribution and optimal acoustic comfort, it is recommended to install the unit at a central point on a wall of the room to be ventilated, as high as possible (compatible with the recommended minimum distances), preferably in a horizontal configuration.
